- Webpack/ViteJS/Parcel
- Babel
- Figma, Basic Photoshop , Illustrator and Premiere usage

Languages:

- Spanish - Native
- English - Advanced
- French - Basic / Intermediate
- German - Basic / Intermediate

EXPERIENCE

Full Stack Web Developer Instructor : Yandex - Practicum by Yandex , 2022 - Current

I had the amazing opportunity to start my first job abroad in Practicum by Yandex (a Russian company with a Lituanian contractor), an online learning platform where I'm in charge of assist students of different cohorts in solving issues facing the exercises , solving the different projects and mentoring them with professional point-of-view on different aspects of coding such as learning new technologies that are not covered by the course, or guide them through new algorithms. I also volunteer in having some free online sessions with the students where they can ask any kind of questions regarding the course or programming in general.

React Architect / Developer : Astra / IT TechGroup , 2022

I was hired to develop a better approach to an Online Casino application they were building. The team was mainly formed by junior developers so the main core had to be also understandable while performant at the same time. Once that was done I was in charge of teaching the rest of the team about the new distribution and job methodology, as I also decided to adopt Git Flow in the process, and guide them through the first functionalities so they could continue the rest of the development.

React Developer : Action Fintech , 2022

I started giving some React.js classes to the front-end team but eventually I ended up developing several functionalities myself. The applications required Web3 knowledge such as interactions with Smart Contracts , Web3.js in Moralis Framework and Metamask Authentication.

ReactJS Instructor : CoderHouse, 2020 - Current

The tasks were the same as in the PHP and Javascript Instructor but in this case the groups were bigger so I was also in charge of 3-7 tutors who controlled a small number of students. I was also in charge of reviewing the final project for each of them and giving feedback together with a note/grade for every course and keeping track of the middle course challenges that were reviewed by the tutors.

PHP and Javascript careers coordinator: EducacionIT , 2018 - 2019

In addition to performing regular teacher tasks new responsibilities were added to me such as coordinating other teachers within the same careers, answering to institutional doubts both from other teachers and students, and developing material to the syllabus whether new or modify the existing one to update it.

PHP y Javascript Instructor : EducacionIT , 2016 - 2020

I'm in charge of the regular teacher's tasks such as giving the class according to a syllabus, controlling small and large groups of people whether in situ or via zoom and sometimes, depending on the course, grade the students. Some of the courses were, but not limited to : PHP y MySQL, Advanced Javascript , Initial Javascript, ReactJS , Advanced ReactJS , Database Introduction , Introduction to HTML , Advanced HTML and CSS , etc.

PHP Ssr Developer : Dinamo Web , 2016

I was in charge of starting from scratch the development and sometimes editing already developed websites made with Wordpress.
Programador PHP encargado de iniciar y editar proyectos en formato Wordpress.

PHP Ssr Developer : Osole , 2015 - 2016

I was in charge of only starting new projects using several different technologies but specially Laravel Framework as their main architecture. I was also, sometimes, in charge of debugging other developer's code at the end of the development stage of each product.

PHP Junior Developer and Layout Designer : Pampanetwork , 2014 - 2015

I was in charge of quality control, stability and tracking of Postback URLs using the Server-To-Server or pixel track (image or javascript tracking) techniques for an Affiliate Marketing system.

Eventually I've been given the opportunity to perform tasks as a Web Developer such as modify basic HTML and CSS code.
